

## SNOW MOLD GUIDELINES

The CIVITAS team has optimized our spray guidelines for our Snow Mold Program to help you confidently go into the winter.

### Optimal Results for Snow Mold Control: A Two-Step Approach on Greens & Fairways

#### Step 1 – Clean Up Application

*NOTE – Apply clean up spray 2-3 weeks prior to final spray.*

	Application (oz/1000 sq feet)
Option 1	CIVITAS (16)* + Propiconazole (14.3% ai) (1-2)
Option 2	CIVITAS (16)* + Iprodione (23.3% ai) (2-4)
Option 3	CIVITAS (16)* + Thiophanate-Methyl (50% ai) (2-4)
Option 4	CIVITAS (16)* + Instrata (5.5-11)

\*all CIVITAS applications must include 1 oz/1000 CIVITAS Harmonizer

#### Step 2 - Final Application (1 or 2 applications applied after Clean Up Spray)

*NOTE - It is critical to **apply final spray before the plant has become dormant**. CIVITAS is a systemic fungicide and cannot be taken into the plant via the xylem or phloem after the plant has gone into dormancy, and therefore cannot prime the plant to defend against disease.*

	Application (oz/1000 sq feet)
Option 1	CIVITAS (16)* + Propiconazole (14.3% ai) (1-2)
Option 2	CIVITAS (16)* + Iprodione (23.3% ai) (2-4)
Option 3	CIVITAS (16)* + Thiophanate-Methyl (50% ai) (2-4)
Option 4	CIVITAS (16)* + Instrata (5.5-11)

\*all CIVITAS applications must include 1 oz/1000 CIVITAS Harmonizer

#### Green Up After Winter

One of the benefits to using CIVITAS as part of your snow mold program is the turf appearance once the snow recedes. CIVITAS helps your turf to go into winter clean and come out of winter healthy. You will notice greener, healthier turf heading into the spring.
